

The Noise-Filtered Institutional Screen.

SYSTEMATIC EXECUTION EDGE:

- **Mathematical Sizing First:**

We calculate universe breadth ($\% > 200$ EMA) and macro shocks before risk.

- **Strict Regime Allocation:**

Capital preservation circuit-breakers trigger when distribution spreads.

- **4 Non-Correlated Gate Models:**

Base-Resets, Momentum Flags, Pocket Pivots, and Support Sweeps isolate setups.

- **Strict Asymmetry Floor:**

Minimum 2.0R to 2.5R reward-to-risk required. Zero chasing extended breakouts.

Systematic. Unemotional. Quantified.

Every afternoon at US market close, our algorithm ingests the entire S&P 500, S&P 400, S&P 600, and Nasdaq-100 institutional universe. We strip out low liquidity, regional banks, and earnings landmines.
